PMI-CPM’s

21st Annual International Conference

Mr. Blaise Durante
Deputy Assistant Secretary
(Acquisition Integration)

11 May 2005
Myths of EVM

- **EVMS is just a government reporting requirement**
  - It has evolved to be owned by the industry

- **Reports are the key product from EVM**
  - Successful programs are a key product
  - Last year Cost/Schedule variance from EV helped direct reductions

- **EVM is a financial management tool**
  - It is a Program Management Tool that everyone should use
  - Helps Acquisition Management Evaluate the Health of the Program

- **Looks backwards, not to the future**
  - Helps predict the future
  - Helps us in making funding and programmatic decisions
Myths of EVM

- **Variance are bad**
  - Variances help up focus program management
  - Show where obstacles are
- **Revising Baselines is bad**
  - Yes and No –
  - We look at performance before and after baselines and total program performance
- **No one looks at my data**
  - Daily decisions in Washington being made on your data
  - We are constantly AMAZED – cost/schedule problem with no technical problem
Myth– Leadership doesn’t look at our data.

Earned Value Management Data is part of an Integrated Program Assessment

SMART

Earned Value

Quarterly Reports (DAES)

Obs/Expenditure Data

PEM/SPO Inputs

AF Leadership Decisions
EVM is used at the Top

- Office of the Secretary of Defense (OSD) Keeps EVM databases on Major Programs
- OSD Decisions can be influenced by EVM
  - EVM may influence distribution of funds
  - It is important to report accurate information
    - Bad information can result in bad decisions
  - Manage with your EVM, or you may manage to be terminated
Fitzgerald’s First Law of Program Management

There are only two phases to a big military program:

Too early to tell and too late to stop

E.H.
Despite our efforts –

- Many PM’s still do not understand EVM
- Many ignore reality; crank formulas; just produce reports
- Need to use common sense
- Need to know the Basics
- Don’t know how to use EVM for Managing

EVM is a key Tool for Program Managers
Looking Forward

PM’s need to analyze the past performance to help us control the future

Past
Are we on cost?
Are we on schedule?
What are the significant variances?
What risks have been reduced or added?
Why do we have variances?
What is the trend to date?
Who is responsible?
Where are our Technical problems?

Present

Future
What is the “to go” plan?
How is it resourced?
When will we finish?
What will it cost at the end?
How do we adjust for risk?
How can we control the trend?
Is the tough stuff already behind us?

In

Integrity - Service - Excellence
The Future

- EVM community needs to pursue improved methods of integrated analysis
  - Try to go beyond traditional Earned Value Management

- Continue to improve the quality and consistency of your data

- The AF is looking into the use of Earned Schedule as an additional management and analysis tool
  - Supplement Earned Value Management
  - No new data collection is required
    - Based on time-phased earned value data (BCWS, BCWP)
Similar to EV, we feel Earned Schedule may have the potential to show trends against a baseline.

Additionally, we should look at its ability to:

- Predict a range of durations
- Evaluate realism of schedule estimates
- Show a range of completion dates
- Compare Earned Schedule trends to the Master Schedule
- Helps to see impacts to other Government programs
Earned Value and new concepts such as an Earned Schedule won’t mature unless we mature our training programs.

- Recognize the need to improve and integrate EVM training:
  - Entry Level
  - Program Manager and Practitioner Level
  - Executive Level

- Train how to Manage with EVM

- The AF will work with OSD and AF School Houses

- Continue Information Sharing:
  - Conferences
  - Training Seminars
QUESTIONS
Have a Great Conference!
